

# Track – The Basics

## Overview

Gain fundamental knowledge of track components, nomenclature, basic maintenance activities as well as common defects and hazards. This course will teach you the requirements to maintain your track at a fully serviceable level, while managing costs through proper preventative maintenance.

## Who should take this course?

Individuals with limited or no track knowledge wanting to understand core concepts as well as inspection and maintenance responsibilities.

For example, a plant manager that contracts out inspection and maintenance and wants to better understand the services and reporting being received.
