

Shipping Transborder Traffic

Traffic crossing an international border requires certain documentation to meet the requirements of the governing agencies. The rail Bill of Lading should be sent to CN by EDI but must be presented to the gate office staff by the driver. The driver must also present the required transborder documentation to the gate office staff.

- After completion of the in gate procedure at the *Speed Gate*, the drivers of all transborder traffic will be directed to the gate office.
- The Bill of Lading and transborder documentation must be presented to the gate office staff for preliminary verification. The gate office staff will arrange for appropriate billing information to be input to CN's system.
- The shipment will not be loaded to rail until final verification has been made by CN's Waybill Centre. Final verification requires a lead time of one hour.
