Update on Western Canadian Grain – Crop Year 2025-26 Week 29

Summary:
In grain shipment week 29, CN moved 673,000 metric tonnes of grain and processed grain products. This is a 24% increase versus the three-year average and 13% above winter supply chain targets. While there were no major issues last week, cold weather across parts of the network reduced fluidity and required CN to employ its train length restrictions to safely move traffic to destination.

CN Maximum Sustainable End-to-End Supply Chain Capacity Guidance
The capacity of Canada's grain supply chain varies through the crop year, and multiple factors place a real limit on the volume of grain that can move through the system at any point in time. The maximum sustainable capacity of the grain supply chain is also a function of the capacity and operational efficiency of the individual pieces of that supply chain, from origin to destination.

It is CN's view that on a sustained basis, the end-to-end grain supply chain can accommodate up to 6,250 cars per week (up to 595,000 metric tonnes per week) of bulk grain and processed grain products during winter, of which approximately 900 cars per week are anticipated to be shipments of processed grain products. These maximum end-to-end grain supply chain capacity levels on CN assume that multiple conditions must be in place to achieve these levels. These conditions include, but are not limited to, the conditions noted in the chart below:

Week 29 - end-to-end grain supply chain dashboard summary

■	Sufficient customer demand to reach guidance levels
■	Grain supply chain fluidity across all major corridors
■	Grain export terminal fluidity - west
■	Grain export terminal fluidity - east
■	Corridor balance
■	Seven-day continuous operations at all major grain export facilities
■	Ability to load vessels during inclement weather
■	Normal rail operating conditions
■	No mainline disruptions or other major supply chain disruptions
■	No labour disruptions

Figure 1. Weekly dashboard – conditions required to achieve maximum sustainable capacity guidance

Continuous operations at all grain export facilities:

- Prince Rupert Grain terminal does not operate 24/7

Vessel loading during inclement weather:

- Limited vessel loading during rain

Bulk grain movement:

For grain shipment week 29, CN shipped 5,922 bulk hopper cars, achieving 111% of the maximum sustainable supply chain capacity guidance of 5,350 bulk hopper cars.

Bulk grain hopper car demand detail - week 29	
Net demand for CN-supplied/private hopper cars	6,257
Maximum capacity	5,350
Planned movement	6,257
as % of maximum capacity	117%
Hopper cars shipped in the want week	5,922
as % of maximum capacity	111%

CROP YEAR-TO-DATE SUMMARIES

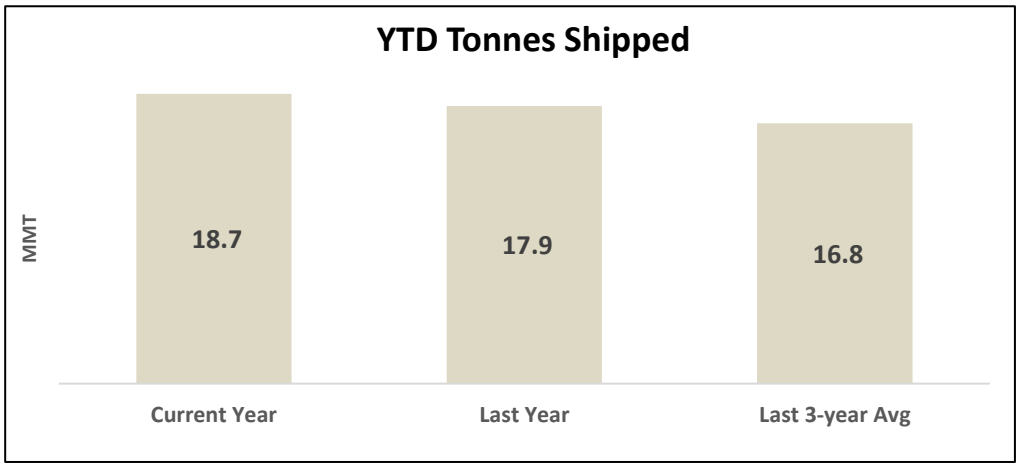

Figure 3. Crop year-to-date shipments of grain and processed grain products from western Canada

CN moved 18.7 MMT of western Canadian bulk grain through week 29 of Crop Year 2025-26. This tonnage is 11% above the prior three-year average, and 4% above last year.

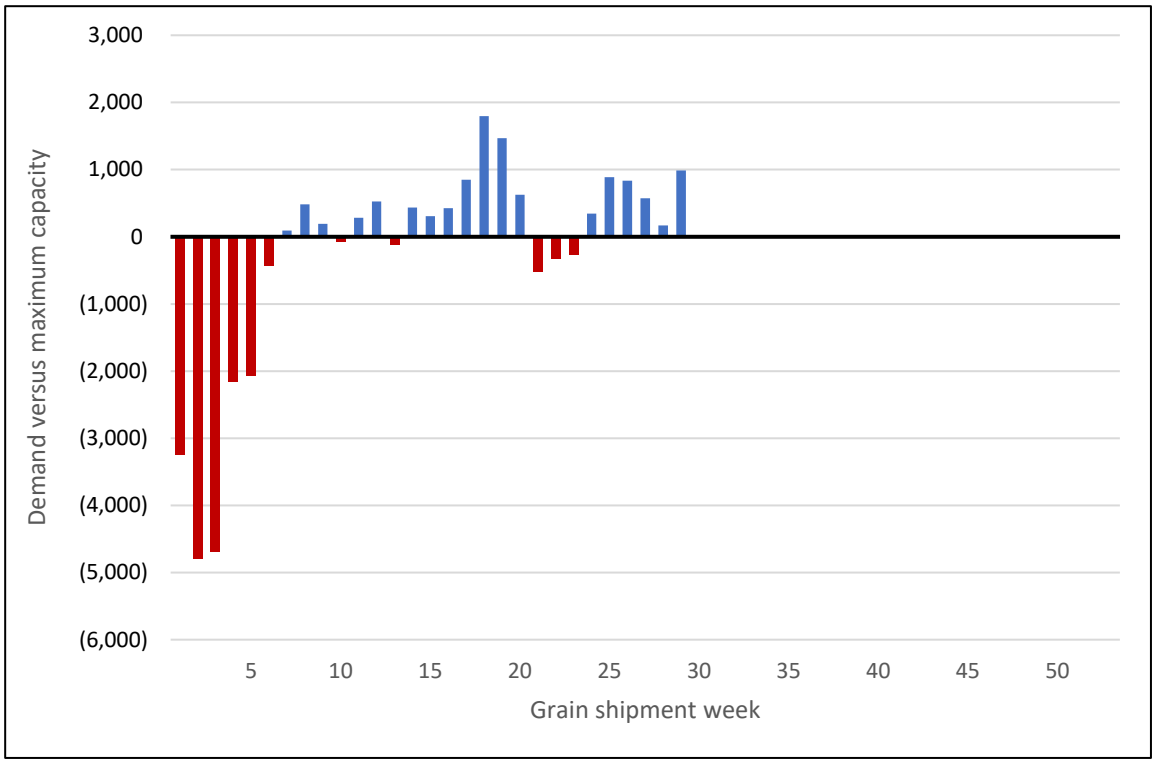

Figure 4. Customer demand for bulk grain movement via hopper car in relation to maximum end-to-end sustainable supply chain capacity on CN for bulk grain movement

Approximately 7,400 hopper cars worth of available grain supply capacity on CN went unutilized through week 29 of the crop year, representing approximately 700,000 metric tonnes.

COMMON CN-SUPPLIED HOPPER FLEET DETAIL

A. Car Demand and Order Planning

- Week 29 net car orders were 4,902. Changes to grain shipment demand in week 29 included:
    - Zero orders rationed
    - 315 orders cancelled throughout week 29
