Update on Western Canadian Grain – Crop Year 2025-26 Week 37

Summary:
In grain shipment week 37 CN moved over 804,000 metric tonnes of grain and processed grain products. This is an increase of 3% versus the previous week and 34% above the three-year average. The result also exceeded supply chain targets by 8%, primarily driven by a fluid overall grain supply chain and balanced corridor movements resulting in total grain movement surpassing guidance levels in week 37.

CN Maximum Sustainable End-to-End Supply Chain Capacity Guidance

The capacity of Canada's grain supply chain varies through the crop year, and multiple factors place a real limit on the volume of grain that can move through the system at any point in time. The maximum sustainable capacity of the grain supply chain is also a function of the capacity and operational efficiency of the individual pieces of that supply chain, from origin to destination.

It is CN's view that on a sustained basis, the end-to-end grain supply chain can accommodate up to 7,800 cars (or up to 744,000 metric tonnes) per week of bulk grain and processed grain products outside of winter, of which approximately 900 cars per week are anticipated to be shipments of processed grain products. These maximum end-to-end grain supply chain capacity levels on CN assume that multiple conditions must be in place to achieve these levels. These conditions include, but are not limited to, those noted in the chart below:

Week 37 - end-to-end grain supply chain dashboard summary

- Sufficient customer demand to reach guidance levels
- Grain supply chain fluidity across all major corridors
- Grain export terminal fluidity - west
- Grain export terminal fluidity - east
- Corridor balance
- Seven-day continuous operations at all major grain export facilities
- Ability to load vessels during inclement weather
- Normal rail operating conditions
- No mainline disruptions or other major supply chain disruptions
- No labour disruptions

Figure 1. Weekly dashboard – conditions required to achieve maximum sustainable capacity guidance

Continuous operations at all grain export facilities:

- Prince Rupert Grain terminal does not operate 24/7

Vessel loading during inclement weather:

- Limited vessel loading during rain

Bulk grain movement:

For grain shipment week 37, CN shipped 7,177 bulk hopper cars, achieving 104% of the maximum sustainable supply chain capacity guidance of 6,900 bulk hopper cars.

Bulk grain hopper car demand detail - week 37	
Net demand for CN-supplied/private hopper cars	7,486
Maximum capacity	6,900
Planned movement	7,013
as % of maximum capacity	102%
Hopper cars shipped in the want week	7,177
as % of maximum capacity	104%

CROP YEAR-TO-DATE SUMMARIES

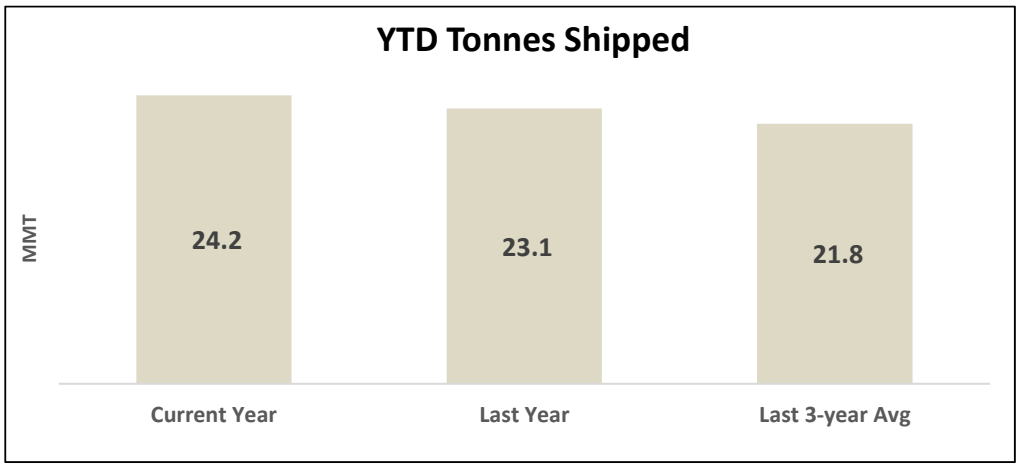

Figure 3. Crop year-to-date shipments of grain and processed grain products from western Canada

CN moved 24.2 MMT of western Canadian bulk grain through week 37 of Crop Year 2025-26. This tonnage is 11% above the prior three-year average, and 5% above last year.

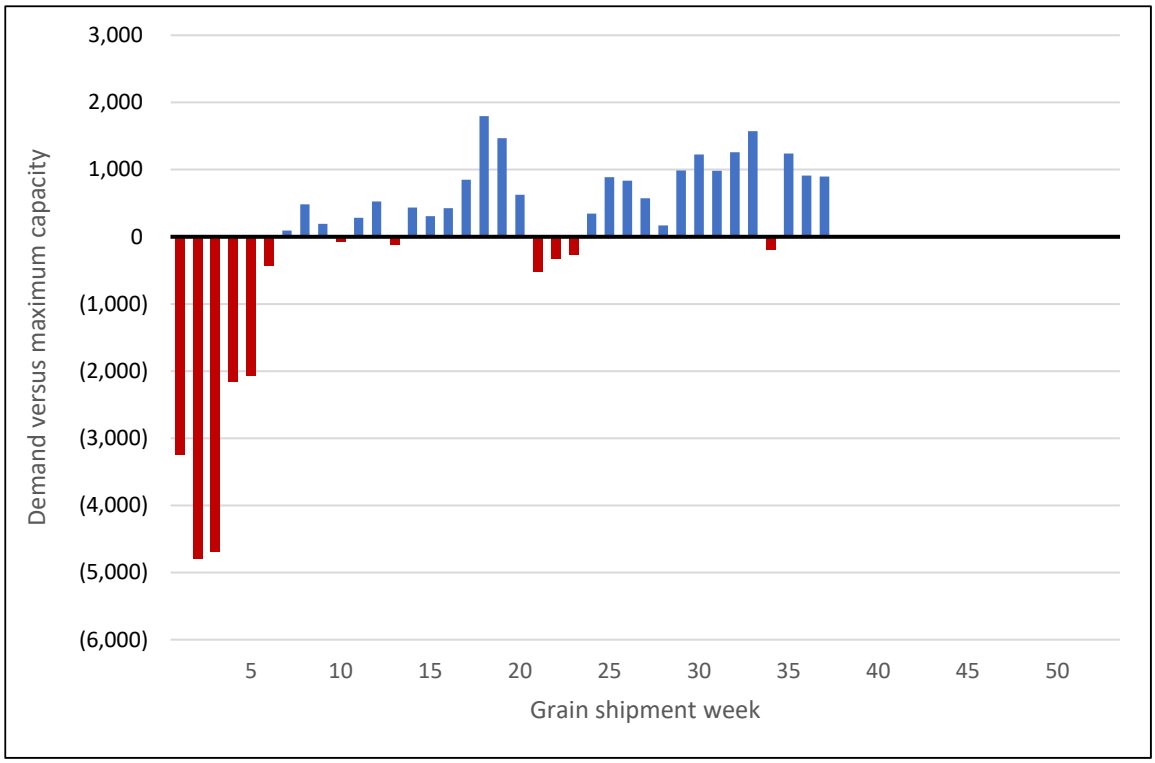

Figure 4. Customer demand for bulk grain movement via hopper car in relation to maximum end-to-end sustainable supply chain capacity on CN for bulk grain movement

Strong customer demand has entirely offset the unused grain movement capacity during the first six weeks of the crop year.

COMMON CN-SUPPLIED HOPPER FLEET DETAIL

A. Car Demand and Order Planning

- Week 37 net car orders were 5,894. Changes to grain shipment demand in week 37 included:
    - 473 orders rationed
    - 279 orders cancelled throughout week 37

B. Car Spotting Performance

- 5,679 empty cars spotted in week 37
- 89% spotting performance against the current week's plan
- 100% of planned orders were spotted in the want week or within 24-72 hours of the end of the want week
