Update on Western Canadian Grain – Crop Year 2025-26 Week 46

Summary:
In grain shipment week 46, CN moved 616,000 metric tonnes of grain and processed grain products, exceeding the three-year average by 28% but falling 17% short of supply chain targets. A significant number of orders were cancelled by one Vancouver customer due to a vessel mechanical issue. Additionally, CN was forced to hold back some trains at a Thunder Bay terminal to avoid further congestion.

CN Maximum Sustainable End-to-End Supply Chain Capacity Guidance

The capacity of Canada's grain supply chain varies through the crop year, and multiple factors place a real limit on the volume of grain that can move through the system at any point in time. The maximum sustainable capacity of the grain supply chain is also a function of the capacity and operational efficiency of the individual pieces of that supply chain, from origin to destination.

It is CN's view that on a sustained basis, the end-to-end grain supply chain can accommodate up to 7,800 cars (or up to 744,000 metric tonnes) per week of bulk grain and processed grain products outside of winter, of which approximately 900 cars per week are anticipated to be shipments of processed grain products. These maximum end-to-end grain supply chain capacity levels on CN assume that multiple conditions must be in place to achieve these levels. These conditions include, but are not limited to, those noted in the chart below:

Week 46 - end-to-end grain supply chain dashboard summary

- Sufficient customer demand to reach guidance levels
- Grain supply chain fluidity across all major corridors
- Grain export terminal fluidity - west
- Grain export terminal fluidity - east
- Corridor balance
- Seven-day continuous operations at all major grain export facilities
- Ability to load vessels during inclement weather
- Normal rail operating conditions
- No mainline disruptions or other major supply chain disruptions
- No labour disruptions

Figure 1. Weekly dashboard – conditions required to achieve maximum sustainable capacity guidance

Sufficient customer demand to reach guidance levels:

- Insufficient customer orders to meet supply chain targets

Continuous operations at all grain export facilities:

- Prince Rupert Grain terminal does not operate 24/7

Vessel loading during inclement weather:

- Limited vessel loading during rain

Bulk grain movement:

For grain shipment week 46, CN shipped 5,003 bulk hopper cars, achieving 73% of the maximum sustainable supply chain capacity guidance of 6,900 bulk hopper cars.

Bulk grain hopper car demand detail - week 46

Net demand for CN-supplied/private hopper cars	5,600
Maximum capacity	6,900
Planned movement	5,600
as % of maximum capacity	81%
Hopper cars shipped in the want week	5,003
as % of maximum capacity	73%

CROP YEAR-TO-DATE SUMMARIES

Figure 3. Crop year-to-date shipments of grain and processed grain products from western Canada

CN moved 30.2 MMT of western Canadian bulk grain through week 46 of Crop Year 2025-26. This tonnage is 14% above the prior three-year average, and 7% above last year.

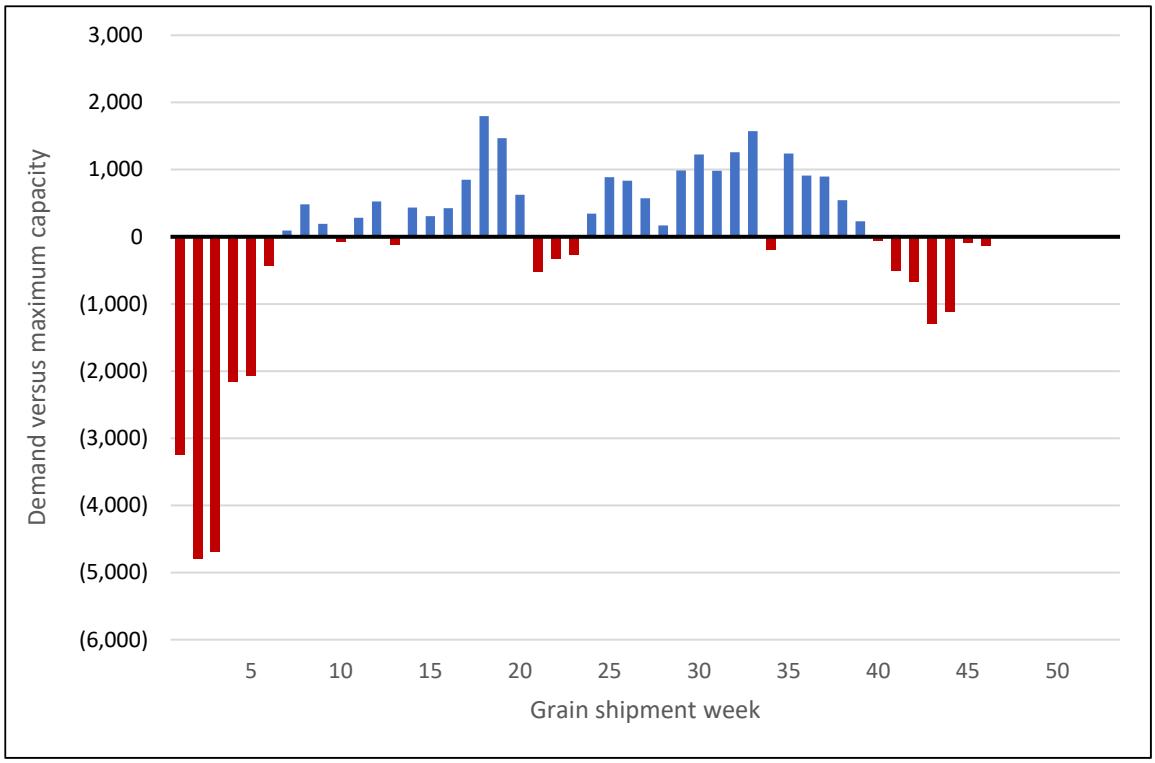

Figure 4. Customer demand for bulk grain movement via hopper car in relation to maximum end-to-end sustainable supply chain capacity on CN for bulk grain movement

Approximately 2,700 hopper cars worth of available grain supply capacity on CN went unutilized through week 46 of the crop year, representing approximately 250 thousand metric tonnes.

A. Car Demand and Order Planning

- Week 46 net car orders were 4,588. Changes to grain shipment demand in week 46 included:
- Zero orders rationed
- 902 orders cancelled throughout week 46
