Update on Western Canadian Grain – Crop Year 2025-26 Week 50

Summary:
CN moved over 615,000 metric tonnes of grain and processed grain products in week 50, 42% above the three-year average, though 17% below supply chain targets. While most Vancouver terminals were fluid, challenges persisted at one North Shore Vancouver terminal as slow unloading of canola meal pellets reduced fluidity and unload capacity at the terminal.

CN Maximum Sustainable End-to-End Supply Chain Capacity Guidance
The capacity of Canada's grain supply chain varies through the crop year, and multiple factors place a real limit on the volume of grain that can move through the system at any point in time. The maximum sustainable capacity of the grain supply chain is also a function of the capacity and operational efficiency of the individual pieces of that supply chain, from origin to destination.

It is CN's view that on a sustained basis, the end-to-end grain supply chain can accommodate up to 7,800 cars (or up to 744,000 metric tonnes) per week of bulk grain and processed grain products outside of winter, of which approximately 900 cars per week are anticipated to be shipments of processed grain products. These maximum end-to-end grain supply chain capacity levels on CN assume that multiple conditions must be in place to achieve these levels. These conditions include, but are not limited to, those noted in the chart below:

Week 50 - end-to-end grain supply chain dashboard summary

Sufficient customer demand to reach guidance levels	
Grain supply chain fluidity across all major corridors	
Grain export terminal fluidity - west	
Grain export terminal fluidity - east	
Corridor balance	
Seven-day continuous operations at all major grain export facilities	
Ability to load vessels during inclement weather	
Normal rail operating conditions	
No mainline disruptions or other major supply chain disruptions	
No labour disruptions	

Figure 1. Weekly dashboard – conditions required to achieve maximum sustainable capacity guidance

Sufficient customer demand to reach guidance levels:

- Insufficient customer orders to meet supply chain targets

Continuous operations at all grain export facilities:

- Prince Rupert Grain terminal does not operate 24/7

Vessel loading during inclement weather:

- Limited vessel loading during rain

Bulk grain movement:

For grain shipment week 50, CN shipped 4,841 bulk hopper cars, achieving 70% of the maximum sustainable supply chain capacity guidance of 6,900 bulk hopper cars.

Bulk grain hopper car demand detail - week 50	
Net demand for CN-supplied/private hopper cars	5,479
Maximum capacity	6,900
Planned movement	5,479
as % of maximum capacity	79%
Hopper cars shipped in the want week	4,841
as % of maximum capacity	70%

CROP YEAR-TO-DATE SUMMARIES

Figure 3. Crop year-to-date shipments of grain and processed grain products from western Canada

CN moved 32.7 MMT of western Canadian bulk grain through week 50 of Crop Year 2025-26. This tonnage is 16% above the prior three-year average, and 8% above last year.

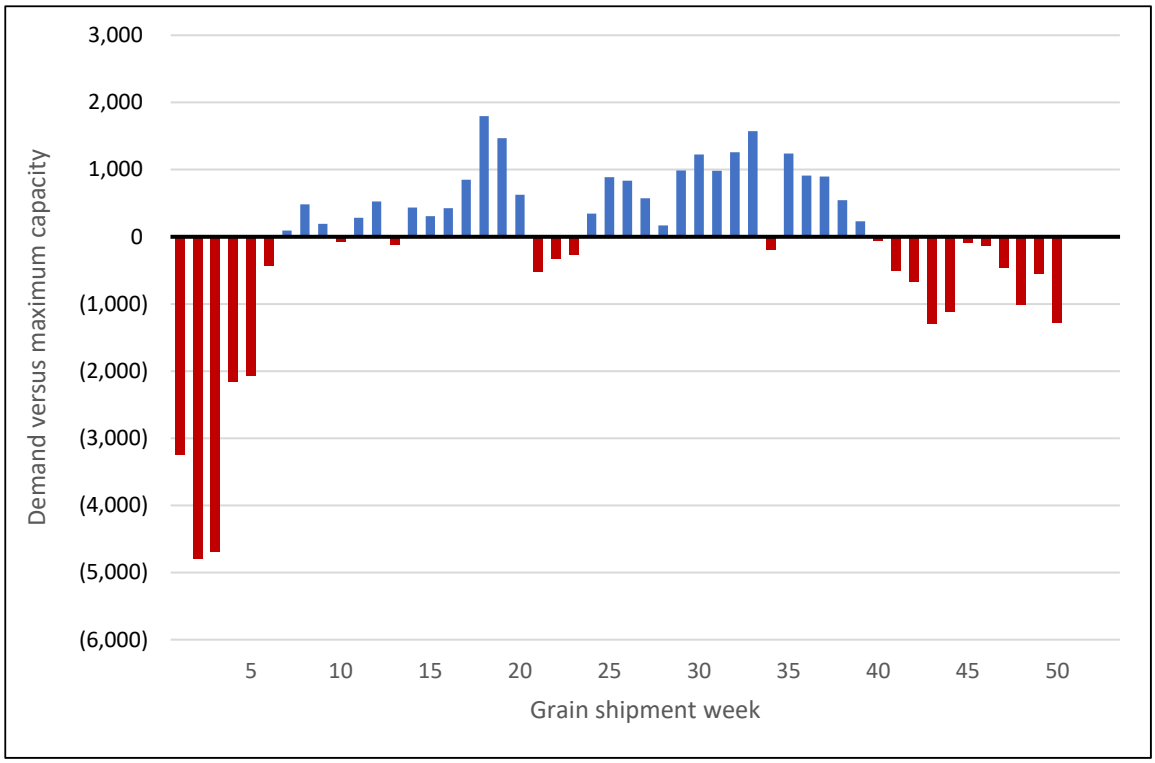

Figure 4. Customer demand for bulk grain movement via hopper car in relation to maximum end-to-end sustainable supply chain capacity on CN for bulk grain movement

Approximately 6,000 hopper cars worth of available grain supply capacity on CN went unutilized through week 50 of the crop year, representing approximately 568 thousand metric tonnes.

COMMON CN-SUPPLIED HOPPER FLEET DETAIL

A. Car Demand and Order Planning

- Week 50 net car orders were 4,302. Changes to grain shipment demand in week 50 included:
  - Zero orders rationed
  - 532 orders cancelled throughout week 50
