Update on Western Canadian Grain – Crop Year 2025-26 Week 9

Summary:
CN shipped over 826,000 metric tonnes of grain and processed products in week 9, surpassing supply chain targets and the three-year average for a second consecutive week. No major supply chain challenges throughout the week as CN remains focused on moving the anticipated strong demand throughout the fall.

CN Maximum Sustainable End-to-End Supply Chain Capacity Guidance

The capacity of Canada's grain supply chain varies through the crop year, and multiple factors place a real limit on the volume of grain that can move through the system at any point in time. The maximum sustainable capacity of the grain supply chain is also a function of the capacity and operational efficiency of the individual pieces of that supply chain, from origin to destination.

It is CN's view that on a sustained basis, the end-to-end grain supply chain can accommodate up to 7,800 cars (or up to 744,000 metric tonnes) per week of bulk grain and processed grain products outside of winter, of which approximately 900 cars per week are anticipated to be shipments of processed grain products. These maximum end-to-end grain supply chain capacity levels on CN assume that multiple conditions must be in place to achieve these levels. These conditions include, but are not limited to, those noted in the chart below:

Week 9 - end-to-end grain supply chain dashboard summary

🟩	Sufficient customer demand to reach guidance levels
🟩	Grain supply chain fluidity across all major corridors
🟩	Grain export terminal fluidity - west
🟩	Grain export terminal fluidity - east
🟩	Corridor balance
🟥	Seven-day continuous operations at all major grain export facilities
🟥	Ability to load vessels during inclement weather
🟩	Normal rail operating conditions
🟩	No mainline disruptions or other major supply chain disruptions
🟩	No labour disruptions

Figure 1. Weekly dashboard – conditions required to achieve maximum sustainable capacity guidance

Continuous operations at all grain export facilities:

- Prince Rupert Grain terminal does not operate 24/7

Vessel loading during inclement weather:

- Limited ability to load vessels in rain

Bulk grain movement:

For grain shipment week 9, CN shipped 8,056 bulk hopper cars, surpassing 100% of the maximum sustainable supply chain capacity guidance of 6,900 bulk hopper cars.

Bulk grain hopper car demand detail - week 9	
Net demand for CN-supplied/private hopper cars	6,757
Maximum capacity	6,900
Planned movement	6,757
as % of maximum capacity	98%
Hopper cars shipped in the want week	8,056
as % of maximum capacity	117%

CROP YEAR-TO-DATE SUMMARIES

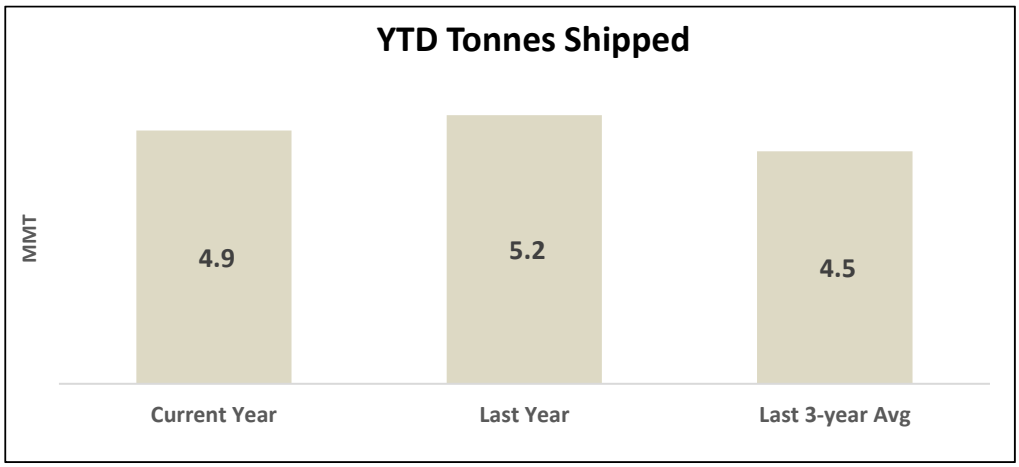

Figure 3. Crop year-to-date shipments of grain and processed grain products from western Canada

CN moved 4.9 MMT of western Canadian bulk grain through week 9 of Crop Year 2025-26. This tonnage is 9% above the prior three-year average, but 6% below last year.

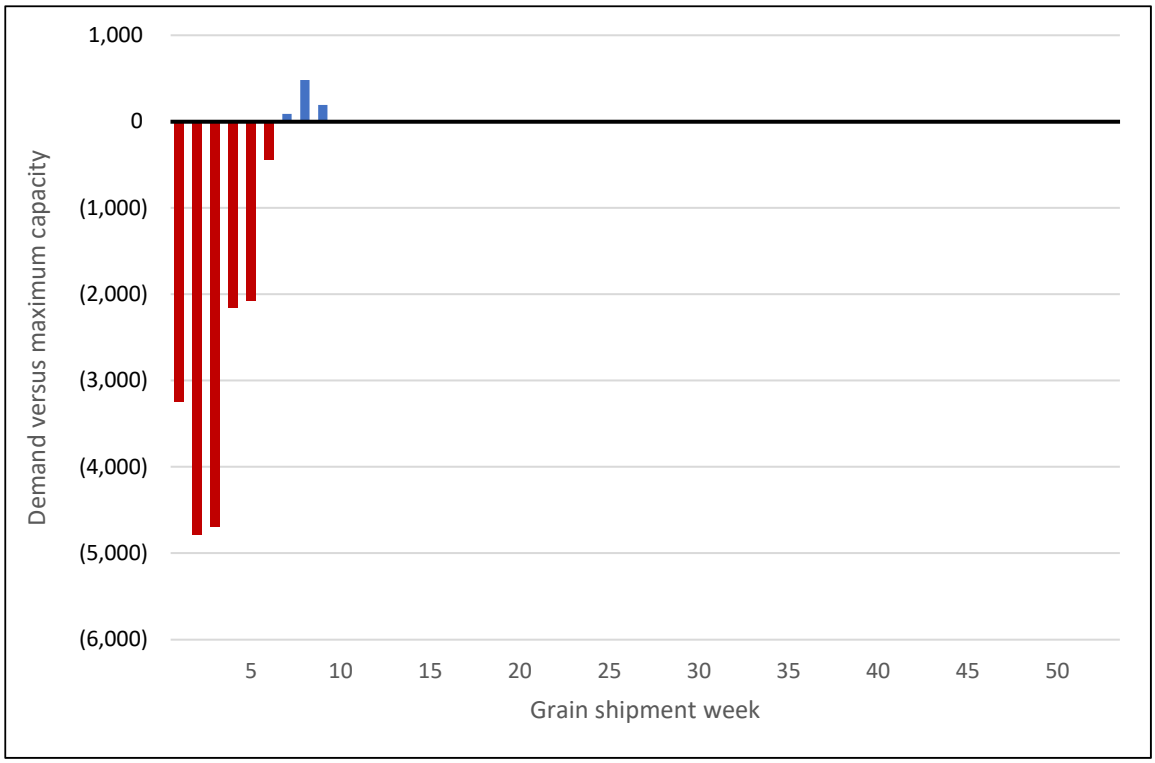

Figure 4. Customer demand for bulk grain movement via hopper car in relation to maximum end-to-end sustainable supply chain capacity on CN for bulk grain movement

Approximately 16,600 hopper cars worth of available grain supply capacity on CN went unutilized through week 9 of the crop year, representing approximately 1.6 million metric tonnes.

COMMON CN-SUPPLIED HOPPER FLEET DETAIL

A. Car Demand and Order Planning

- Week 9 net car orders were 5,459. Changes to grain shipment demand in week 9 included:
    - Zero orders rationed
    - 288 orders cancelled throughout week 9
