

Mobile Reporting System (MRS)

To empower the Train Crew with a safe and efficient method to report car movements in the field real-time.

- Improves safety with up-to-date shipping instructions and dangerous goods information on all railcars
- Provides Advance Arrival Notifications to customers directly from crew
- Reduces delay between field activity and system update
- Streamlines reporting, while removing manual input and transcription errors
- Photo evidence for optional services revenue improvement, which reduces billing disputes
- Reduces environmental footprint of fax, printer, paperwork

adoption rate

MRS hand-held device:
Intuitive screen layout for
'switching' cars.

Train crew enter all car movements at customer locations. This has historically been a manual and paper-based system, causing delays and a higher probability of reporting errors.
